

CSP SpoolView

NonStop Spooler Interface

Windows™ GUI Alternative to PERUSE

CSP SpoolView is a Windows™ productivity tool for PERUSE users on the HP NonStop® Server Platform.

CSP SpoolView is an alternative to PERUSE and offers significantly enhanced functionality.

Developers, analysts, support desk personnel, operations staff, and any other user who needs to interact with their spooler jobs can use CSP SpoolView.

New users do not need to learn the proprietary PERUSE commands, but instead can use CSP SpoolView's intuitive graphical interface.

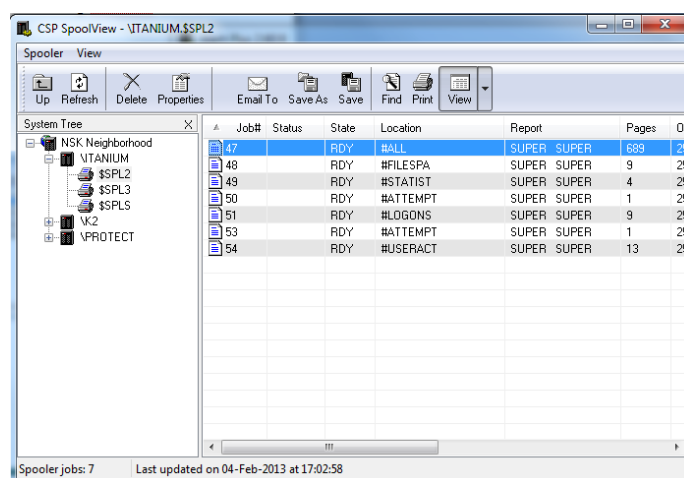

Key Features:

- Easy spooler job management & viewing
- Display available systems and their respective spoolers
- Download print jobs to their PC with a couple of mouse clicks
- Save jobs as an edit file, plain text or as HTML, on the HP NonStop Server
- Save jobs as HTML, RTF (rich text format), and PDF on your PC
- Email your print jobs using your default email program, in one easy step

Additional Productivity Benefits:

CSP SpoolView contains several utilities including text formatting and bi-directional text searching.

Multiple jobs can be selected at once and multiple explorer-type views can be selected, including the job's properties.

Enterprise Security Management

SpoolView is integrated into CSP's range of Nonstop security management products including Protect, CRM and Passport.
